ADVISORY & DELIVERY

DELIVERY IN PRACTICE

Major infrastructure projects

Across the Kingdom and Central Asia

Practical HSSE and critical risk work, from reviewing the evidence to improving the systems and tools teams use.

THE WORK DELIVERED

We combined structured record analysis with field verification, leadership discussions and workforce engagement. Findings were translated into revised procedures, control requirements, training materials and a prioritised improvement plan.

Understand the position

Reviewed management systems, incident records, safety culture, contractor readiness and working conditions.

Strengthen critical controls

Developed risk and control registers, revised procedures and practical checklists, with responsibilities for verification.

Support people and decisions

Delivered leadership workshops, competence materials and checks on fatigue, supervision, communication and welfare.

Make improvement actionable

Produced reporting measures, dashboards, prioritised actions and a roadmap for management decisions.

WHAT THE CLIENT COULD PUT TO USE

Revised documents in the client's own system. Field verification tools. Training and workshop materials. Clear actions with owners and target dates. A practical route from findings to implementation.

Discuss a similar scope

Establish the function, deliver a focused improvement programme or support ongoing implementation. Scope and deliverables are agreed for each engagement.

Client and project identifiers are withheld. Further disclosure requires client written consent.
